## SYMPOSIUM SNAPSHOT, 18 OCTOBER: **HOW CYBER HAS CHANGED THE WORLD AROUND US**

Featuring renowned Irish Forensic Cyberpsychologist and author of “The Cyber Effect”, Dr. Mary Aiken, who will address the impact of technology on human behavior and a Panel Discussion on the impact of cyber on future social, political and economic climates.

Panel members include Mr. Robert B. Dix, Vice President of Global Government Affairs and Public Policy at Juniper Networks. Joining the panel will be Dr. Mike Warner, Cyber Command Historian and expert on the future of intelligence in the digital age and Professor Bill Nolte of the Maryland Cybersecurity Center, University of Maryland. An authority on the smart cities of the future, Mr. Michael Petitti, from Uptake Technologies, has also been invited to join the panel.

IMAGINE....in just a few years, the internet will connect much more than computers, phones and laptops; in fact nearly every sensor and control device which exists will be online. Cars, refrigerators,

televisions, household appliances, cameras, aircraft, and even your wallet will all be connected—together with sophisticated weapons systems and analytic engines. The Internet of Things (IoT) is here today but in the future billions more devices will communicate

with each other creating the Internet of Everything (IoE) which will open up new levels of revenue, an unbearable world of advertising, and opportunities for hacker groups to use information to their advantage. You won't want to miss our panel discussion on the benefits and risks of this new cyber world.

Also joining the program for an exciting talk and book event will be Mr. Yudhijit Bhattacharjee, award-winning writer of espionage, cybercrime, science and medicine essays for the New Yorker, National Geographic and other publications and recent author of “The Spy Who Couldn't Spell”.
