

Kimberly Faltemier is the Senior Director of Product at Two Six Technologies, where she leads the development of Pulse, a suite of AI software products for information operations and intelligence analysis. Kimberly has been developing AI-driven national security solutions since 2019, when she joined Thresher, a start-up focused on measuring Chinese censorship and providing data-driven insights into the Chinese government's information control strategies. She led the product department at Thresher through its acquisition at Two Six Technologies.

Before transitioning to DefenseTech, Kimberly spent nearly a decade in the federal government, focused on China's cyber operations. She is dedicated to leveraging emerging technologies to improve U.S. national security and create a competitive edge in global competition.

Kimberly holds a Bachelors of Science in Computer Engineering and International Affairs from The George Washington University.
